

## Delray doctor is one of few in the area dedicated to face and nose plastic surgery

> Posted by DAve DiPino on January 28, 2009 at 10:04 AM

Dr. Steiger is Board certified in Otolaryngology- head and neck surgery. He served as chief resident of the Department of Otorhinolaryngology-Head and Neck Surgery at the University of Pennsylvania, and received fellowship training in facial plastic and reconstructive surgery at the University of Michigan Health System. Steiger served as a faculty member with the University of Michigan's Division of Facial Plastic Surgery before returning to South Florida to open his practice. He earned his medical degree from the University of Miami School of Medicine.

Dr. Jacob Steiger has made some notable strides after recently opening his facial plastic and reconstruction surgery office at 4675 Linton Blvd., Suite 200, in Delray Beach. The Ivy League-trained facial plastic and reconstruction surgery specialist has secured admitting privileges at two area hospitals. Dr. Steiger recently opened Steiger Facial Plastic Surgery in Delray Beach, and was approved as a medical staff member at Delray Medical Center and West Boca Medical Center. He currently performs surgeries at both hospital locations for patients from throughout South Florida and elsewhere with consultations and non-surgical services taking place at his private practice location. Delray Medical Center was named as one of America's top 50 hospitals, and West Boca Medical Center joins Delray Medical Center as part of the Tenet South Florida health care network.

Steiger is a native of South Florida and one of only a handful of area physicians whose practice is solely dedicated to plastic surgery of the face and nose.

"My areas of expertise include facial rejuvenation procedures (facelift, brow lift, fat grafting, chemical peels), Rhinoplasty and revision Rhinoplasty, blepharoplasty (eyelid surgery), otoplasty (ear pinback), scar revisions, and facial MOHS reconstruction. Among the advanced techniques I offer are vertical facelifts, which utilize a three-dimensional approach to correct lax skin and ligaments while restoring facial volume with fat micrografting, and deep plane facelifts, which treats the underlying tissue layers and muscles to provide a longer-lasting rejuvenation benefit," Steiger said.

Dr. Steiger also provides a number of non-surgical interventional procedures, including facial fillers, Botox treatments, the full range of skin resurfacing options and liposculpturing.
