NEW FACILITY OPENED IN EARLY 2012

“As a face specialist, I can offer the full spectrum of non-surgical injectables, peels and lasers, to today’s most advanced surgical facelift: the deep-plane facelift.”

When it comes to helping people achieve their best, Dr. Jacob D. Steiger focuses on the face and neck. A facial plastic surgeon, Steiger not only performs the most advanced surgical and nonsurgical techniques available to erase imperfections and signs of aging, but his new, 5,000-square-foot, state-of-the-art facility in Boca Raton is dedicated to the spectrum of facial plastic surgery procedures.

“As a face specialist, I can offer the full spectrum of nonsurgical injectables, peels and lasers, to today’s most advanced surgical facelift: the deep-plane facelift,” Dr. Steiger says.

Performed by few plastic surgeons in the country, the deep-plane facelift requires exceptional surgical skill. Traditional facelifts focus on lifting skin and underlying tissue from the jowls down. The deep-plane approach goes deeper into the facial tissue and addresses muscles and ligaments around the cheeks, as well as the jowls and neck. It tends to be more effective, last longer and look more natural than traditional facelifts.

“The deep-plane facelift is the ideal anatomic approach to facelift surgery. It offers the high quality results that my discerning patients seek” he says.

Dr. Steiger built his facility to ensure the safety, comfort and privacy of patients coming to him for facial rejuvenation procedures. It features a fully-accredited in-house operating room staffed by a board certified anesthesiologist, overnight suite, luxurious treatment rooms and areas, back exits for privacy and much more.
